Areas of the natural environment that exist require protection because of their scarcity or their value as representative examples of particular ecosystems and landscapes. Preservation of the natural character of the wetlands, rivers and their margins is a matter of national importance. The Kopuatai Peat Dome is the largest peat dome in the country and contains at least six threatened plants, the locally threatened North Island fernbird, a number of important fish species and has international significance as a waterfowl habitat wetland. Council acknowledges the Dome is part of our vanishing natural heritage. The Peat Dome is very vulnerable to change and parts of this wetland remain unprotected. Explanation: Section 13, Other Methods.

While some outstanding and significant natural features have been identified in Schedule 3, it is important when contemplating activities that may affect other natural features, that the criteria of Appendix 1 Section 5, are used to evaluate their significance, and thus determine whether that activity has permitted status or whether it is one that may require a resource consent. Council has agreed that by July 2003 it will initiate a study to identify any other significant natural features within the District that fit within the criteria so that this rule does not become a costly exercise to members of the community with the objective of completing the exercise by July 2005.

Council recognises that many landowners are already aware and voluntarily protect indigenous vegetation and wetlands for their own sake and as habitats of indigenous fauna. Council encourages such protection through incentives provided in this plan as follows:

- Subdivision rights where certain significant features are to be protected by landowners. See bonus protection lots Section 6, Subdivision.
- Provision of professional assistance from Council staff, liaison with other agencies and a willingness to consider supporting specialist outside advice where appropriate.
- Identification of the role of Council's Strategic and Annual Plans for advice to property owners, education, financial assistance and other incentives. This may include in the future rate relief, waiver of development levies or transferable development rights. See Section 13: Other methods.

- Limited land purchase for esplanade reserves and access. See Section 13: Other Methods.
- Promotion of, and provision for assistance in the preparation of Landcare Plans which provide for eligibility for Council grants for fencing and planting. See Section 13: Other Methods.

Advice Note: It is noted that all works on Protected Trees listed in Schedule 3 (Part A) shall be ~~in~~ undertaken in accordance with the Electricity (Hazards from Trees) Regulations 2003.

10.3 Performance Standards

10.3.1 ~~Approved Arborists~~ Tree Protection

For the permitted activity rules which are subject to compliance with this performance standard, ~~rely on the Council list of qualified arborists,~~ a report from a qualified arborist on councils list of approved arborists shall be submitted to Council and the report shall be acknowledged and accepted by Council prior to any works commencing, with the exception of Rule 10.2.2(e), in which case the report can be submitted within 5 working days of any works being undertaken.

The report shall document the rationale for why the works are required and assess the impact of the works on the long term health and vitality of the tree (where the tree is to be retained).

Photographic records of before and after works shall be submitted.

10.3.2 Conservation plans

Any resource application on a Category 1 building which in the opinion of the Council involves significant work or alteration shall include a Conservation Plan as a part of the application. A Conservation plan must include:

- (i) A statement of the significance of the heritage item.
- (ii) The physical, conservation action and care necessary for retaining or revealing the heritage significance - this may include maintenance, reconstruction or restoration.
- (iii) Particular activities which may be compatible with the protection of the heritage item and those which may need to be constrained.
- (iv) Policies to enable the cultural significance of a place to be retained in its future use and development.

Explanation

These scheduled natural resources are considered significant (through complying with the evaluation criteria in Appendix 1) to Matamata-Piako and worthy of protection in the public interest. Resources included in the schedules are considered to be community assets and which would be valued ahead of most land development proposals which might endanger them or compromise their form or condition. Additional features may be added to the schedule by the Plan Change procedure including compliance with Appendix 1.

Heritage resources can be easily devalued or compromised by development or change, hence the need for rigorous controls over the redevelopment of these resources. The degree of protection afforded to heritage places should be adjusted to take account of the relative heritage value of the feature concerned. Categorising heritage significance into registration classes allows greater scope for adaptation and redevelopment of less significant items. It can also establish priority for the allocation of conservation resources.

Scheduled Protected trees listed in Schedule 3 (Part A) are recognised as community assets and are afforded the greatest level of protection. Any alteration to the Schedule must be by way of a plan change. The general tree protection category recognises the considerable amenity, **historical and ecological value** afforded by **the most notable trees in our district on roads and reserves** and hence the provision for their protection. Trees located in the vicinity of rivers and streams contribute to water and soil conservation and can assist in minimising damage from natural hazards such as floods, erosion and siltation.

To avoid unnecessary delay in maintaining any scheduled items provision is made for minor or insignificant works as permitted activities.

Provisions for scheduled resources take precedent over the more general Te Aroha Character Area provisions. By controlling non-scheduled buildings in the conservation area it is expected that over time the particular character of Victorian Te Aroha will be retained and enhanced. Activities which do not adversely affect this character will be permitted in this area, as will new buildings and additions complimentary and in keeping with the character of the Te Aroha Character Area.

The Kaitiaki (Conservation) zone is applied to significant natural landscapes and habitats where the geographical spread of areas or features is sufficient to justify zoning rather than individual schedule of areas. This zone applies to areas to protect or enhance their natural, intrinsic, or other recognised values of an area. It covers the Kaimai Ranges, Western Ranges, Peat Dome, riparian areas and Kahikatea floodplain forest remnants over 4000m² in area. The Kaitiaki zone in the Kaimai Ranges includes all that land held in public reserve, areas identified by previous Hauraki Catchment Commission reports as being subject to soil conservation and generally all land down to the bush line at the base of the ranges. Pastoral country is generally excluded. Provisions are designed to achieve the conservation emphasis of the zone and any development or activities are restricted to ensure adverse effects on the environment are minimised. Mineral or peat processing is prohibited in this zone as such activities can be located in less environmentally sensitive areas, and their adverse effects can be more appropriately mitigated. Protection Forestry is permitted subject to Council conditions concerning rehabilitation, replanting within one year and soil conservation matters. The Forestry Code of Practice will be used by Council as a guide to the implementation of the controlled category criteria. Pastoral farming that exists as at November 1996 may continue with existing use rights. The clearance of further bush for farming use within the Kaitiaki zone is not to be allowed. Buildings are discretionary within the Kaitiaki zone to ensure an appropriate location relative to the visual impact, the impact on ecology and fire fighting facilities.

The Council will undertake a review, 5 years after the plan has become operative, of the environment along the Waihou, Waitoa and Piako rivers in terms of land use, the Kaitiaki (Conservation) zone and the categorisation of activities and methods used within the Kaitiaki (Conservation) zone in conjunction with affected landowners, interest groups and other members of the public who may have an interest.

10.4 Restricted Discretionary Activity Criteria

For activities which are a Restricted Discretionary Activity in accordance with Rule 10.2.2, Council has reserved control and may impose conditions in respect of the following matters:

10.4.1 General

- (a) Whether the proposal has adverse effects on the scheduled resource and the measures taken to avoid, remedy, or mitigate potential adverse effects;
- (b) The necessity for the proposed works or activity and any alternative methods and locations available to the applicant for carrying out the work or activities;
- (c) Whether the proposed activity detracts from the intrinsic value of the resource;
- (d) Whether the works or activity would wholly or partially nullify the effect of scheduling the resource;
- (e) Whether there is any change in circumstance that has resulted in a reduction of the value of the resource since it was scheduled in the plan.

10.4.2 Trimming, maintenance, removal and the undertaking of any activity or works within the dripline of any **protected** tree listed in **Part A of Schedule 3 (Part A)**:

- (a) The necessity for carrying out the works, including whether the tree is:
 - Dead, dying, diseased, or has lost the original qualities for which it was originally scheduled,
 - Required to be removed from drainage systems, rivers or watercourses,
 - Interfering with network utilities or other public works,

- Causing significant or unusual hardship.
- (b) The extent of trimming, maintenance and the methods to be employed and whether this is in accordance with accepted arboricultural practice;
- (c) Any alternative methods which may be available to protect the tree, including modification of development controls where this would encourage retention and enhancement of existing large trees on the site;
- (d) Whether the tree can be relocated;
- (e) Whether the proposed activities in the dripline of the tree are, in the opinion of Council, likely to damage the tree or endanger its health;
- (f) The extent to which the tree contributes to the amenity of the neighbourhood, both visually and physically, including as a habitat for native birds and animals;
- (g) Whether the proposed landscaping or revegetation can compensate for any envisaged loss.

10.5 Discretionary and non-complying assessment criteria.

The Restricted Discretionary Assessment criteria may be used as a framework for assessing Discretionary and Non-complying ~~subdivision activities~~. However all actual and potential effects from any such activity shall be assessed and may be used in determining an application and/or imposing conditions
